
DATA DOCUMENTATION ON THE FLORA FOREST PLOT – SINCE CAMPAIGN 2005

Preface

Floristic data are taken only on forest plots (CSA = 1, 2, 3) and not on the poplar grove plots (CSA = 5). They are taken from the floristic survey realized on a 15m radius circular plot.

The floristic surveys are realized all year round by the different inventory teams. That's why it is better to take into account ecological data when analyzing floristic data (DATEECO, OBSDATE, OBSVEGET mostly).

Exhaustive listing of the raw data

Except if mentioned, all the raw data are collected in the field.

IDP: inventory plot ID

CD_REF: taxon ID

ABOND: dominance-abundance indices (partially calculated)
